Other topics	33
TOTAL	<u>181</u>

COMMENTARY

In 1978 in the Congress at Zagreb (Yugoslavia), Professor Bohm was President and Dr Herak, Congress Secretary. In the scientific programme, primary importance was given to herd problems and especially to large herds. Dysentery was given much attention. Aujeszky's disease was the subject of considerable attention. The infectious diseases as usual were also discussed, but most attention was given to TGE. The SPF-system and immunology were strongly represented. The organizers awarded some of the active members of the IPVS with the "Hyologia and Hyoiatria" medal.

The plenary speakers were: V. Cvetkovic (Yugoslavia) for G. Trbojevid, D. Durman, M. Zjalic, V. Cvetkovic and M. Sviben: "Economic pig production all over the world." J. Tournut (France): "Hyology and Hyoiatrics in Europe;" R. Ramirez Necoechea (Mexico): "The Latin American pig production" and A. Leman (USA): "Pig production and veterinary practice in the United States of America
